Open to Relocation | Visa Sponsorship Required | Netherlands • Germany • Singapore • Sweden • UK

PROFESSIONAL SUMMARY

Senior Python Backend Engineer with 7+ years of experience designing and delivering scalable backend systems, REST APIs, and microservices for healthcare and enterprise platforms. Deep expertise in Python, Django, FastAPI, PostgreSQL, and async processing. Production-proven with 99.9% uptime, 60% faster deployments, 40% better query performance, and 70% faster API response times. Hands-on with Docker, Kubernetes, CI/CD pipelines, and AWS. Actively seeking onsite roles in Europe or Singapore with visa sponsorship.

TECHNICAL SKILLS

Languages: Python, JavaScript

Backend: Django, FastAPI, Django REST Framework (DRF), Flask, Celery, Async Processing, Webhooks

API & Architecture: REST APIs, Microservices, System Design, API Versioning, RBAC, OAuth2, JWT, Rate Limiting

Databases & Cache: PostgreSQL, MySQL, MongoDB, Redis — query optimization, indexing, ORM, caching

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, VPC), Docker, Docker Compose, Kubernetes, Terraform, GitHub Actions, GitLab CI/CD, Jenkins

Observability: Prometheus, Grafana, Elasticsearch, Kibana, ELK Stack — alerting, dashboards, MTTD reduction

Testing & Quality: pytest, Unit Testing, Integration Testing, TDD — 85%+ test coverage

Tools: Git, GitHub, Linux/Ubuntu, NGINX, Jira, VS Code, Postman

WORK EXPERIENCE

Senior Python Backend Engineer | **CDA Technologies Pvt. Ltd.** Dec 2022 – Present • Hyderabad, India

CDA Technologies — India-based healthcare SaaS company, multi-tenant platform serving 10,000+ enterprise users.

Backend Engineering & API Development

- Architected backend services and microservices for a multi-tenant healthcare analytics platform — compliance, reporting, and decision-support workflows at 99.9% uptime
- Designed and built 20+ production REST APIs with versioning, rate limiting, OAuth2/JWT authentication, and RBAC handling thousands of daily requests
- Improved data reporting pipeline performance by 40% through PostgreSQL query optimization, indexing strategy redesign, and Pandas vectorization
- Implemented async processing using Celery task queues, reducing synchronous load on the API layer by 35%
- Enforced HIPAA-compliant security standards — OAuth2, JWT, RBAC, input validation — across all API surfaces

Deployment & Cloud Infrastructure

- Designed and deployed production FastAPI application on AWS EC2 with Docker containerization and NGINX reverse proxy — zero manual intervention
- Implemented Blue-Green deployment strategy eliminating downtime across all production releases
- Built CI/CD pipelines on GitHub Actions — automated build, unit tests, integration tests, health-check validation, and rollback on failure — reducing deployment time by 60%
- Containerized multi-service stack with Docker Compose (FastAPI, PostgreSQL, Redis) across dev and production
- Managed AWS infrastructure: EC2, S3, Lambda, security groups, IAM roles, and VPC configurations

Observability & Reliability

- Instrumented APIs with Prometheus for real-time metrics — request rates, latency, error rates
- Built Grafana dashboards with alerting rules, reducing mean time to detect (MTTD) from hours to under 5 minutes
- Maintained 99.9% production uptime as Designated Responsible Individual (DRI) for core backend systems

Python Backend Developer | AR XTLABS LLC

Jul 2021 – Jul 2022 • Hyderabad, India

- Developed and maintained 25+ REST APIs for enterprise ticketing and user management platforms supporting 5,000+ daily active users
- Reduced API response time from ~4s to ~1.2s (70% improvement) through PostgreSQL query optimization, indexing, and Redis caching
- Achieved 85% test coverage through pytest unit and integration testing — reduced production bug rate by 35%
- Containerized 8 microservices with Docker and established CI/CD pipelines, cutting release cycles from weekly to daily
- Reduced manual workflow effort by 60% through backend automation using Python Celery task queues

Python Developer | ViHave Innovations

Apr 2021 – Jun 2021 • Hyderabad, India

- Built backend modules for a cloud-based HR and audit platform — leave management, audit scheduling, and reporting using Python and Django
- Implemented automated email/SMS notification system using Celery and SMTP/SMS gateways, improving alert delivery by 40%

Software Developer | Charter Global

Jan 2018 – Mar 2021 • Hyderabad, India

- Built backend systems for insurance and recruitment platforms handling 50,000+ records using Django and MongoDB
- Designed REST API endpoints, ORM models, and business logic for high-volume workflows processing 1,000+ transactions/day
- Reduced system downtime by 40% through root-cause analysis, hotfix deployment, and proactive monitoring
- Mentored 3 junior developers and led bi-weekly knowledge-sharing sessions on Django best practices and API design

KEY PROJECT

Production FastAPI Backend with CI/CD & Observability on AWS — github.com/prashanthchaduvula

Stack: FastAPI, Django, PostgreSQL, Redis, Docker, GitHub Actions, Prometheus, Grafana, NGINX, AWS EC2

- Deployed production FastAPI app with microservices architecture — NGINX reverse proxy, Dockerized multi-service stack, Blue-Green zero-downtime releases
- Full async processing pipeline with Celery and Redis, improving throughput by 45% under peak load
- GitHub Actions CI/CD: lint → pytest → integration test → health-check → deploy → rollback — zero manual steps
- Prometheus metrics + Grafana dashboards with alerting — P95 latency tracking, error rate monitoring, downtime detection under 5 minutes

EDUCATION

Bachelor of Computer Science — Satavahana University, Telangana | 2017

CERTIFICATIONS

- Docker Training for Absolute Beginners — KodeKloud (2025)
- Kubernetes Lens IDE — KodeKloud (2025)

In progress: AWS Solutions Architect Associate (SAA-C03) — target Q3 2026
